VA-708x THERMAL VALVE ACTUATORS

VERSATILE.

The VA-708x terminal unit actuator series provide ON/OFF and DAT control in HVAC application.

The compact design of these actuators make them suitable for installations in confined spaces.

The actuators are available with 24V and 230V power supply and with direct or reverse action to cover any customer needs.

EASY MOUNTING SYSTEM.

Thanks to the valve adapter system, Johnson Controls actuators fit on 99% of all valves on the market. They're ideal for retrofits or replacements. IP54 allows the actuator to be mounted in any direction.

VERY LOW ENERGY CONSUMPTION.

With energy consumption of just 1 watt, the VA-708x Thermal Actuator requires 50 % less energy than the previous version.

The VA-708x terminal unit actuators stand out for their exceptional quality, sophisticated capabilities, durability, easy assembly and attractive designs.

For more information on how VA-708x can help you get more out of your building management investments, please contact your local Johnson Controls representative
